Introduction

The purpose of this Glossary is to provide the reader with a quick refresher when he runs across key terms in the text. Pask's system is both novel and complex, and few people will remember all the nuances at a first reading — hence the need for a Glossary. The Glossary is not, however, a substitute for the text. No attempt has been made to give completely self-sufficient explanations (for that, after all, is the function of the main text). Nevertheless, some concessions have been made, usually by giving the general (ordinary language) meaning of a term before specifying Pask's precise usage. By this means it is hoped that the Glossary is something more than a closed system of lexical definitions.

The Glossary does have certain limitations. Firstly, it has not been tested on potential readers, either alone or in conjunction with the main text (it has been read by experts, which is quite another thing). So readers may, on occasion, discover that the Glossary does not quite meet their needs because possible sources of misunderstanding have not been adequately identified and debugged. Secondly, there are certain kinds of omission, for example, some terms have, on reflection, been left out; minor variations in term usage have been ignored; and no entailment structure for the system itself has been presented. Thirdly, there may be errors of commission — though a lot of hard work has been put in to reduce the chance of mistaken definitions. Fourthly, the presentation of terms is, regrettably, rather haphazard (no consistent rules for ordering multi-word terms have been used; you should find a term classified alphabetically under the most important word). Despite these reservations, I hope readers will find the Glossary of use as they work towards an understanding of Pask's system.

I am especially grateful for the comments of colleagues at Systems Research and IET; they have removed many inconsistencies and clarified obscurities. The final wording and the responsibility for any errors is mine, or course. I should be interested to receive any suggestions or comments on the Glossary that readers might care to make; if the book runs to
